

Masterclass in Infectious Disease in Solid Organ Transplantation

There have been major advances in organ transplantation in recent years, giving a new lease of life to patients with organ failure. However, the procedure creates opportunities for transmission of infections from donor to recipient and reactivation of latent infections or acquisition of new infections in the recipient. The evolution of new and more potent immunosuppressive regimens, wider epidemiological exposure to infections among donors and recipients who are now fitter and more active, availability of more sensitive tools to diagnose and monitor infections, newer anti-infectives to treat or prevent infections and emergence of multi-drug resistance in bacteria infecting or colonizing donors are some of the challenges facing patients and professionals in transplantation. It is important that the entire multi-disciplinary team looking after donors and recipients are updated with the latest developments in donor and recipient evaluation and management.

This Masterclass, brings together world expertise in Transplant Infectious Disease with local experts in transplantation. Held over one and half days from 4th-5th August 2018, the Masterclass is intended to update transplant coordinators, intensivists, transplant pharmacists, transplant physicians and surgeons on various aspects of Transplant Infectious Disease. The format includes Plenary lectures, Symposia, Case presentations and Meet the Expert sessions. Proposed topics include:

- The Evolving Timeline of Infections in Solid Organ Transplantation
- Local guidelines in Deceased Donor Evaluation
- Superbugs in ICUs
- Molecular Diagnostics in Diagnosis of Infections
- Hepatitis in Donors and Recipients
- Evaluation of Infectious Risks in the Living Kidney or Liver Donor
- Fungal infections in Transplantation
- Vaccinations in Transplantation
- Local Guidelines in Post-transplant monitoring of infections
- Cytomegalovirus infections
- Emerging Infections in Transplantation
- Tuberculosis in Solid Organ Transplantation
- Tropical Infections in Transplantation
- Perspectives in Paediatric Transplant ID
- Management of Infections in Kidney and Liver Transplant Recipients

Participants will receive certification and CME accreditation. Register early to enjoy early Bird Rates.

Take the opportunity to attend this exciting Masterclass and be updated in the field and Network with colleagues in transplantation in the region! We look forward to interacting with you at the masterclass.
